The invention relates to alorated human PKU polypeptides lescreted and transmembrane polypeptides an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour in necrosis factor-alpha (TMF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for chordrocyte cells and a method for chordrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polyprucleotides are useful in molecular biology, including uses as inclusioned properties by recombinant techniques and in antisense RNA and DNA and in gene therapy. The polyprucleotides may also activated in preparing PRO polypeptides by recombinant techniques and in antisense there is the ransgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful and edicament for treating a condition responsive to the polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of or proliferation of or specestal muscle cells, for modulating proliferation of stimulating editocyte cells, for stimulating the upcake of glucose or FRA by skeletal muscle cells or adipocyte cells, for stimulating cheration of adipocyte cells, for stimulating cheration of cartilage disorders such as sports injuries and architics. PRO polypeptides which stimulate the release of prolegylycans (from cartilage are useful for treating sports-related joint problems, arthritis. PRO polypeptides which stimulate edit sorders such as various mammalian haemoglobin-associated disorders such as various thalassaemias and conditions which sequence represents a human PRO polymericed data for this patent is also available in electronic forms formations.
to isolated human PRO polypeptides (secreted and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              from USPTO at seqdata.uspto.gov/sequence.html.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the problemation of chondrocyte cells and a method for correcting the presence of a tumour in a mammal (e.g. lung, colon, breast, prostate, rectal, cervical and liver tumours). The polynucleotides are consected in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating suese as hybridisation probes, in chromosome and gene mapping, in generating suesting PRO colon, propertides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the colophopeptides by recombinant techniques and in generating enter for transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a medicament for creating a condition responsive to the polypeptides or antibodies are used in preparing an edicament for as tumours, for modulating the uptake of glucose or FPA by adipocyte cells, for stimulating the proliferation of inner ear urricular cartilage, for stimulating the proliferation of cyproceoglycans from pericyte cells, for stimulating the release of proteoglycans from pericyte cells, for stimulating the release of cycchines from PROC cells, for inhibiting the binding of A-peptide to factor VIIA, for inhibiting the differentiation of adipocyte cells and for stimulating the proliferation of supporting a human PRO proliferation of endothelial cells. This sequence represents a human PRO polymucleotide of the invention. Note: The sequence data for this patent consideration colon sequence. The sequence data for this patent consideration colon sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TGTCTGAGCTCGCGCCCCCGCTGCTTATTTCCTTTGCTGCTGCTTCCGCTGCTGC 124

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the release of TNF-alpha from human blood, for modulating the uptake of glucose or FFA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating cells, for stimulating proliferation of endothelial cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour is lung, colon, breast, constants probes are useful for isolating genomic and cDNA nucleotide sequences or antisense probes. (I) is also useful as therapeutic agent. PRO is useful in theraction. A polynucleotide (II) encoding (I) is useful in chromosome and gene mapping, in generation of antisense RNA and DNA, in the preparation of PRO polypeptide, for generating transgenic animals or received to the preparation of subserving transgenic animals or received to the preparation of propertice for generating transgenic animals or received to the preparation of propertice for generating transgenic animals or received to the preparation of propertice for generating transgenic animals or received to the preparation of animals or received to the propertice for the preparation of subserving the propertice or the propertice for generating transgenic animals or received to the propertice for generating transgenic animals or received to the propertice for the propertice for generating transgenic animals or received to the propertice or the propertice for ge
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Deforge L, Desnoyers L, Filvaroff E, G

244 304 | TGCAGAAGGCATCGCCCTCCCACAGCCCCCCTGATGAGCTGTGAGCCCAGCTTAGTG 898 typing. This sequence encodes 124 406 TCCTTCCTGCCCCGAAGCTAGGCCCCGAGTCCCGCCGGGGCTGAGGAGACCGACTGGGTGC 184 466 526 586 364 646 424 706 484 766 544 826 604 886 664 724 778 838 64 knockout animals which in turn are useful in the development and screening of therapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome marker, and for generating probes. An anti-(1)-antibody is useful in diagnostic assays for PRO, edetecting its expression in specific calls, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. (I) and (II) are useful for tissue typing. The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the release of TNF-alpha from human blood, for modulating the uptake of glucose or FPA by skeletal muscle cells or adiporyt

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 274, Application US/09023655
Patent No. 6607879
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Cocks, Benjamin G.
APPLICANT: Susan G. Stuart
APPLICANT: Geffrey J. Sellhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF BLOOD CELL GENE
TITLE OF INVENTION: EXPRESSION
NUMBER OF SEQUENCES: 1508
CORRESPONDENCE ADDRESS:
ADDRESSEE: INCTE PHARMACEUTICALS, INC.
STREET: 3174 PORTER DRIVE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GAGGTGGCTGACCTCAAGAAGCAGTGTGATGTGCTGGTGGAAGAGTTTGAGAAGAAGCATC

Sequence 5779, Application US/09949016
Patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION:
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
TILE REFERENCE: CL00130,
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT FILING DATE: 2000-04-14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            522

Patent No. 5948676

GENERALI INFORMATION:

APPLICANT: Changy Yuan

APPLICANT: Changy Yuan

APPLICANT: Behenzky, Roy A.

APPLICANT: Behenzky, Roy A.

APPLICANT: Behenz, Isidore S.

APPLICANT: Moore, Patrick S.

TITLE OF INVENTION: Immediate Early Protein From Kaposi's

TITLE OF INVENTION: Brocoma Associated Herpesvirus, DNA

TITLE OF INVENTION: Encoding Same And Uses Thereof

NUMBER OF SEQUENCES: 21

CORRESPONDENCE ADDRESS:

ADDRESSEE: Cooper & Dunham LLP

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                            Sequence 1
